Jeremy Wong

AI and Machine Learning Specialist
Fresh Graduate

Singapore

Professional Summary

Aspiring software engineer with a strong passion for technology and a deep interest in solving complex problems through innovative coding. Highly motivated, quick to learn, and eager to take on new challenges in software development. Known for resourcefulness and proactivity, with a strong commitment to contributing to the field through creativity and discipline.

Education

Bachelor of Science in Computer Science (Machine Learning and Artificial Intelligence)
University of London - SIM
2021 – 2025

Diploma in Aerospace Electronics
Ngee Ann Polytechnic
2016 – 2019

GCE 'O' Levels
Queenstown Secondary School
2011 - 2015

Work Experience

Intern, Aztech

March 2018 – August 2018

- Assisted in troubleshooting and repairing faulty products
- Understanding of technical issues and solutions.
- Supported manufacturing operations, ensuring adherence to customer specifications.
- Collaborated with team members to enhance coordination and achieve production goals.
- Contributed to quality control by inspecting products to ensure compliance with standards.

Projects

AI Game Comparison Project (Q-Learning vs Rule Based)

January 2024 – September 2024

- Designed and implemented AI systems for games, using Python to compare rule-based and machine learning approaches.
- Developed and tested Minimax algorithm and decision trees for rule-based AI, alongside neural network models for machine learning-based AI.
- Conducted in-depth analysis on the performance of different AI strategies across two game environments, comparing decision-making efficiency, adaptability, and computational resource usage.
- Proficiency in AI development, optimization, and game theory by conducting a comparative evaluation of different strategies.

PyBullet Creature Simulation with Genetic Algorithms

July 2024 – September 2024

- Simulated virtual creatures in a dynamic environment using PyBullet physics engine and evolutionary algorithms.
- Developed genetic algorithms to optimize creature designs based on fitness metrics such as movement and stability.
- Integrated a simulation pipeline to evolve creatures' shapes and motor control, resulting in progressive performance improvements.
- Demonstrated technical proficiency in physics simulation, algorithm design, and Python programming.
