

Wong Yuan Jie, Jeremy

Frontend Software Engineer

Singapore (Singaporean) | wyjj.dev@gmail.com | www.linkedin.com/in/wyjj

PROFESSIONAL SUMMARY

Frontend Software Engineer with nearly 2 years of experience building production web applications used across multiple teams. Strong in Vue 3, React, and modern JavaScript. Experienced integrating LLM APIs and building AI-powered interfaces in production environments. Ships clean, maintainable code with fast iteration cycles. Works closely with designers and backend engineers to deliver consistent, scalable user experiences.

TECHNICAL SKILLS

Languages:

JavaScript, TypeScript, HTML, CSS, Python

Frontend & Web:

Vue 3, React, Vite, Node.js, Express, EJS, REST API, Responsive Design

AI & Integration:

LLM API Integration, TensorFlow, PyBullet, AI chatbot interfaces

Tools & Practices:

Git, GitHub, Chrome DevTools, VS Code, Agile, CI/CD, Cross-functional collaboration

Education

Bachelor of Science in Computer Science (Machine Learning & Artificial Intelligence)

University of London – SIM | 2021 – 2025

Diploma in Aerospace Electronics

Ngee Ann Polytechnic | 2016 – 2019

WORK EXPERIENCE

Frontend Software Engineer

Sunlands Technology Group | Dec 2024 – Present | Singapore

- Built and maintained internal web platforms using Vue 3 and Vite, supporting daily operations across multiple teams.
- Developed modular, reusable UI components improving feature delivery speed and long-term maintainability.
- Integrated LLM APIs to build a production AI chatbot interface, connected to WeChat for internal and user-facing interactions.
- Built an AI media generation interface supporting voice selection, slide templates, and virtual avatar options.
- Implemented message rendering, session handling, and UI state management for real-time chat flows.
- Integrated REST APIs and handled asynchronous responses to ensure stable, performant user experiences.
- Defined API contracts with backend engineers and translated product requirements into clear UI interaction flows.
- Improved frontend build efficiency through Vite configuration and component-level optimization.

Electronics Intern

Aztech | Mar 2018 – Aug 2018 | Singapore + China

- Diagnosed and repaired faulty electronic products; supported manufacturing QA and workflow improvements.

Projects

AI Game Comparison Project (Q-Learning vs Rule-Based)

Jan 2024 – Sep 2024

- Built game AI systems in Python comparing rule-based logic and reinforcement learning agents.
- Implemented Minimax and decision tree agents; trained Q-learning models and evaluated convergence.
- Benchmarked agents across two game environments on decision quality, adaptability, and compute cost.

PyBullet Creature Simulation with Genetic Algorithms

Jul 2024 – Sep 2024

- Simulated virtual creatures in PyBullet physics engine using evolutionary algorithms.
- Optimized body structures and motor control via genetic algorithms; measured movement efficiency across generations.
- Built end-to-end simulation pipeline integrating AI optimization with physics-based modeling
